

REAL-TIME, PORTABLE TIME AND ATTENDANCE SOLUTION

REAL-LINK time and attendance system allows you to keep track of when employees have been on and off site, employee shift start and end times and who is on site at any one time. You have access to all of this information in real-time—no checking log cards or typing up information after the event. There is also no need for an expensive electronic clocking in and out system or a device that must be hard-wired to a network, as REAL-LINK can work from a mobile phone or a cost-effective Timebox. Using the mobile phone network all of the data is sent immediately to the server meaning that you can then access the information as soon as it happens from a web-based login.

How does it work?

- Each employee is issued with a RFID tag that uniquely identifies them—this can be a printed ID card, a key fob or a sticker stuck to another identity card.
- When entering or leaving the site, or starting or ending a shift the employee touches his RFID tag to the mobile phone or the Timebox.
 - The details of who that is, the time and date and the phone/ Timebox (location) are sent to the server immediately via the mobile phone network.
 - This information can then be viewed from any computer (including tablet or smart phone) with an internet connection by logging in to a website with a username and password.
 - All data can be exported for future reporting or sent immediately to other IT systems.

Print your own ID cards for your **REAL-LINK** time and attendance system.

Zebra manufacture the world's most popular card printers. These are also affordable and easy to use. By combining RFID enabled identity cards, a Zebra card printer and the **REAL-LINK** time and attendance system you can have a simple, cost-effective and professional solution in place fast.

Reports

The Real-Link time and attendance system enables you to see in real-time when someone has entered or exited a site or when someone has started or ended a shift. This report can be downloaded as a PDF file or a CSV file for further reporting. You can also view a work time report which will calculate the number of hours an employees has worked or been on a particular site with a graph for comparison with other staff.

Benefits of the **REAL-LINK** time and attendance system

- Ability to find out immediately who is/has been on site.
- No need to spend time checking time clocks or entering data from timesheets.
- Will have report to show who has been on-site for safety reasons.
- Working time per employee (or time spent on site) can be calculated for each day very simply.
- Can print ID cards to use with Real-Link system easily and fast.
- No need to an expensive time and attendance system that requires a network connection—Real-Link utilises the mobile phone network to upload the data.
- Real-Link time solution is portable—if you only have a six month contract on a particular site it does not matter as the phone or Timebox can simply be picked up and moved to another site.
- Can be integrated to your existing IT systems.
- No huge upfront costs as the software licence for the Real-Link system is charged monthly/quarterly.

Use Real-Link on building sites, outdoor events, cleaners, schools, colleges, universities, multiple sites, casual labour plus many more ...
