

## MOBILE PHONE PROOF OF ATTENDANCE SOLUTION FOR THE SECURITY INDUSTRY

REAL-LINK is a proof of attendance solution and lone worker protection tool that is ideal for the security industry. Real-Link utilises a variety of technologies such as NFC (near-field communication) phones and RFID (radio frequency identification) tags. By using Real-Link you will be able to immediately prove where your employees went, at what time, and what they did whilst there. This data can then be pushed in real-time to any other system for further processing and analysis, or may be viewed from the Real-Link web based back-office application.

### Benefits of Real-Link for the Security Industry

- Proof that your guards are performing the patrols that they should be and at the correct time.
- Help to ensure the safety of your employees with Real-Link's added lone worker protection features.
- Provide evidence to your customers of when their sites have been patrolled.
- Easy to use solution that runs on a mobile phone so no need for separate devices such as PDA's or 'patrol wands'.
- Ability to collect data on-site such as incident reporting without filling in paper forms.
- Capture photos and video and upload instantly.
- All information available in real-time.
- Web-based reporting allows any-time access to data for managers, authorities and even your clients.
- Charged on a monthly / quarterly subscription basis so no large initial start up costs.

## How does it work?

- Employee carries NFC-enabled mobile phone containing Real-Link application
- Visits locations around site that have pre-positioned RFID tags
- Touches tag with phone, which identifies who and where they are
- Phone can display a set of location-sensitive options that worker chooses from – specific checks for that location, incident reporting, suspicious vehicles etc.
- All data is transmitted immediately via mobile phone network or wireless network in real-time.

## Additional Features & Lone-Worker Protection

- Attendance Alerts—notification by SMS or email if a location has not been visited within a pre-set time period
- GPS Tracking—see where each employee has been on Google maps
- Patrol routes—set routes depending upon site, time of day and member of staff. See easily which patrols have been completed using the in-built reports.
- Panic button/tags—emergency call made if employee is in danger
- Ask for protection—employee can ask for a certain amount of time to complete visit. Control room/supervisor alerted if not completed within expected time.
- Accelerometer—'man down' functionality. If phone is horizontal for a set period of time it will automatically call a pre-set number
